Proof <ul style="list-style-type: none"> <li>Includes formulas</li> <li>Shows all test data</li> </ul>	3	3	Okay
Screen captures	2	2	Okay
Program design for Project <ul style="list-style-type: none"> <li>The Depositable interface includes the <code>deposit</code> method as specified.</li> <li>The Withdrawable interface includes the <code>withdraw</code> method as specified.</li> <li>The Balanceable interface includes the <code>getBalance</code> method as specified.</li> <li>The Account class: <ul style="list-style-type: none"> <li>stores a balance.</li> <li>has a constructor that takes a number as an argument and assigns the number to the balance.</li> <li>has get and set methods for the balance.</li> </ul> </li> <li>The CheckingAccount class: <ul style="list-style-type: none"> <li>inherits the Account class.</li> <li>stores a monthly fee.</li> <li>has a constructor that takes a number as an argument and assigns the number to the monthly fee.</li> <li>has get and set methods for the monthly fee.</li> <li>has a method that subtracts the monthly fee from the account balance.</li> <li>has a method</li> </ul> </li> <li>The SavingsAccount class: <ul style="list-style-type: none"> <li>inherits the Account class.</li> <li>stores a monthly interest rate and a monthly interest payment.</li> <li>has a constructor that takes a number as an argument and assigns the number to the monthly fee.</li> <li>has get and set methods for the monthly fee.</li> </ul> </li> <li>The Transactions class contains the two static methods specified.</li> <li>User input is validated as specified using the MyValidator class</li> <li>Displays appropriate error messages for invalid data</li> <li>The results are formatted correctly</li> </ul>	5	4	The constructor for the CheckingAccount sets the balance for the account to the monthly fee. The constructor for the SavingsAccount sets the balance for the account to the monthly interest rate. This is incorrect. I understand you did this because the Account class has a constructor that requires a parameter. The way to fix this is to add another constructor to the Account class; one that does not require a parameter.
